

Dataset Source: <https://www.martingrandjean.ch/>
<https://snap.stanford.edu/data/>

The dataset is about accessing a network through different locations. The Dataset provides a database of geographic information, including coordinates. You can use this data to analyze traffic patterns, road connectivity, and other transportation-related metrics.

The Network Repository is a collection of network datasets for various domains, including citation networks for scientific papers. This data can be used to analyze patterns of scientific collaboration and influence.
